Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hill or Austin in view of .

Noda or Sugata or Arai et al teaches a cylindrical section attachment for a power tool having a cutting tool rotatable therein. The attachment has a first portion adapted to be secured in “an approximately dust-tight relationship” to the forward portion of the power tool and the cutting tool may be adjusted to extend beyond the end of the first attachment portion. A dust exit member, extending at an angle, which may be 90 degrees, is provided to communicate with the interior of the first attachment portion. Note that the “attachment portion” in Noda or Sugata or Arai et al is adjustable and may be fixed at selected longitudinal positions. While the devices of Noda or Sugata or Arai et al are not disclosed in combination with the particular “spiral saw bit” or the “slotted opening” adjustment, one possessing ordinary skill in the art would be expected to recognize that the use of various known cutting bits are useable with the power tools of Noda or Sugata or Arai et al and the slotted adjustment means constitute obvious design variants of similar means in the devices of Noda or Sugata or Arai et al that allow adjustment of the distance that the tool extends beyond the end of the attachment portion. Note also that a “slightly tapered” vacuum hose connection is common in vacuum hose connections and the use thereof for the instant vacuum attachment would not be unobvious as a design choice. Further, no criticality is

ascribed to the relative dimensions of the “dust exit member” and the “first attachment portion” and such constitutes an obvious design variant of the relative dimensions of the comparable parts illustrated in Noda or Sugata or Arai et al.

### *Response to Arguments*

Applicant's arguments with respect to claims 1-9 have been considered but are moot in view of the new ground(s) of rejection.

### *Conclusion*

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
